According to our (Global Info Research) latest study, the global High Pressure Braid-reinforced Tubing market size was valued at US\$ 1698 million in 2025 and is forecast to a readjusted size of US\$ 2484 million by 2032 with a CAGR of 5.6% during review period.

In 2025, global High Pressure Braid-reinforced Tubing production reached approximately 515.63 million meters, with an average global market price of around US\$3.20 per meter.

The gross profit margin of major companies in the industry is between 22%-38%.

In 2025, the global production capacity of High Pressure Braid-reinforced Tubing was approximately 687.50 million meters.

High Pressure Braid-reinforced Tubing is a flexible tubing product reinforced with textile, steel wire, or synthetic fiber braids to withstand high internal pressure, abrasion, vibration, and fluid transmission stress. It is widely used for hydraulic systems, pneumatic equipment, fuel lines, industrial machinery, spraying systems, and high-pressure fluid transfer.

The industrial chain of High Pressure Braid-reinforced Tubing covers upstream materials such as rubber compounds, thermoplastic resins, steel wire, polyester fiber, aramid fiber, additives, adhesives, and extrusion equipment. The midstream consists of extrusion, braiding, curing, cooling, cutting, pressure testing, surface marking, and packaging. Downstream applications mainly include hydraulic machinery, automotive

systems, construction equipment, agriculture machinery, industrial cleaning, fluid transfer equipment, and maintenance markets.

Hydraulic transmission, mechanical equipment and engineering fluid delivery scenarios boost the application of high pressure braid-reinforced tubing. With strong pressure resistance and tensile strength, it ensures safe and stable medium conveying. Anti-aging and corrosion-resistant formula greatly extend the service life in harsh working environments.
