According to our (Global Info Research) latest study, the global High Pressure Density Separator market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The high-pressure density separator is a mechanical sorting equipment mainly used for waste classification, recycling and reuse. Based on the principle of aerodynamics, this equipment uses controllable airflow as the sorting medium. Under the action of controllable airflow, the selected materials are sorted according to density and particle size. The airflow can separate lighter materials (such as paper, Plastic bags, films, etc.) are carried upward or to farther places in the horizontal direction, while heavy materials fall because the updraft cannot support them, or are thrown closer in the horizontal direction due to inertia. Therefore, the wind sorting process is based on the settling rules of various solid wastes in the air, thereby achieving the purpose of classification, recycling and reuse.
