According to our (Global Info Research) latest study, the global High-pressure Grinding Rollers market size was valued at USD 694.5 million in 2023 and is forecast to a readjusted size of USD 869 million by 2030 with a CAGR of 3.3% during review period.

High pressure grinding roller is used for size reduction of ores, minerals and rocks. It compresses the feed material between two rotating rollers, one of which floats and other one remains in a fixed position. HPGR is mainly used in pellet feed to increase the specific surface area of the particles, to allow for strong pellets. This is in contrast to normal comminution applications, where size reduction is the main purpose. In pellet feed application, HPGR competes with dry ball mills, which consume more energy. HPGRs are commonly used in cement, ore and mineral processing industry.

China is the largest market, with a share about 25%, followed by North America and Europe, with the share about 23% and 20%. In terms of product application, the largest application is cement building materials, followed by metallurgy.
