According to our (Global Info Research) latest study, the global High-pressure Maintenance-free Accumulators market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

High-pressure maintenance-free accumulator is an energy storage device for hydraulic system, which is used to store hydraulic energy and release it when necessary. These accumulators are designed to work under high pressure, usually between 3000 and 10000 psi, and are used in various industrial applications that require high pressure hydraulic systems. The maintenance-free aspect of these accumulators refers to their design without regular maintenance, such as checking the liquid level, replacing the seals or cleaning the accumulators. This is achieved by using a capsule or diaphragm that separates the hydraulic fluid from the gas (usually nitrogen) used to compress the fluid. When hydraulic fluid is pumped into the accumulator, it compresses nitrogen, which stores energy as potential energy. When the hydraulic system needs additional power, the hydraulic oil is released from the accumulator, and the stored energy is used to provide power for the hydraulic system. The air bag or diaphragm design can prevent the hydraulic fluid from contacting with nitrogen without maintenance.
