High Pressure Mercury UV Lamp is a type of gas discharge lamp. It evaporates mercury through bipolar arc discharge, thus generating characteristic spectra of mercury vapor. These spectra are mainly concentrated in the ultraviolet part, especially the wavelength of about 365nm, with extremely high ultraviolet radiation intensity. This lamp is named because a certain amount of mercury is added to the inside of the lamp tube, and under the high voltage excitation of the power supply, the mercury inside the lamp tube is atomized to emit ultraviolet light.
