According to our (Global Info Research) latest study, the global High Pressure Pascalization Equipment market size was valued at US\$ 21.8 million in 2024 and is forecast to a readjusted size of USD 29.6 million by 2031 with a CAGR of 4.5% during review period.

High Pressure Pascalization Equipment, also known as High Pressure Processing (HPP) equipment, is a non-thermal food and beverage preservation technology that uses extremely high pressure (typically around 400–600 MPa or 58,000–87,000 psi) to inactivate bacteria, yeasts, molds, and other pathogens. This process extends shelf life and maintains the taste, texture, and nutritional quality of products without the need for chemical preservatives or high temperatures. Foods are packaged and placed in a chamber where water is used to apply uniform pressure, ensuring safety and freshness while preserving natural characteristics.
