According to our (Global Info Research) latest study, the global High Pressure Two-Way Ball Valve market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

High pressure two-way ball valve is a valve used in high-pressure fluid pipeline systems to control the opening and closing of fluids. This kind of ball valve is composed of a valve body, a valve core, a sealing ring, an operating rod and other components. By rotating the operating rod, the valve core rotates in the valve body, thereby achieving on-off control of the fluid path.

High pressure two-way ball valves have the characteristics of high-pressure endurance, corrosion resistance, fast opening and closing, good sealing performance, and wear resistance. They are widely used in high-pressure fluid pipeline systems in chemical, electric power, metallurgy and other industries to control various media. The flow plays an important role in control and safety protection.
