The global High Pressure Two-Way Ball Valve market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

High pressure two-way ball valves have the characteristics of high-pressure endurance, corrosion resistance, fast opening and closing, good sealing performance, and wear resistance. They are widely used in high-pressure fluid pipeline systems in chemical, electric power, metallurgy and other industries to control various media. The flow plays an important role in control and safety protection.

High pressure two-way ball valve is a valve used in high-pressure fluid pipeline systems to control the opening and closing of fluids. This kind of ball valve is composed of a valve body, a valve core, a sealing ring, an operating rod and other components. By rotating the operating rod, the valve core rotates in the valve body, thereby achieving on-off control of the fluid path.
