The global High Purity Aluminium Slab market size is expected to reach \$ 871 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

In 2025, global high-purity aluminum slab production reached approximately 170 kilotons, the average price is 3600 usd/ton. High-purity aluminum slab refers to a flat material made from high-purity aluminum ingots through plastic processing techniques such as hot rolling or cold rolling.

It is a semi-finished product of high-purity aluminum, possessing all the excellent properties of high-purity aluminum (such as excellent electrical and thermal conductivity, corrosion resistance, and light reflectivity), while also having the dimensional accuracy, flatness, and surface quality of sheet metal. Its main use is as a direct raw material for further processing, in the manufacture of precision components with stringent purity requirements, such as high-end electronic components, vacuum coating target blanks, high-performance reflective mirror panels, and linings for special chemical containers.

This report studies the global High Purity Aluminium Slab production, demand, key manufacturers, and key regions.
