The global High Purity Boehmite Powder market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

High purity boehmite powder is a fine white powder consisting of aluminum oxide hydrate (AlO(OH)), also known as alumina hydrate. It is derived from the mineral bauxite through a series of chemical processes. The term “high purity” indicates that the powder has a very low level of impurities, resulting in a material with consistent and desirable properties.

Boehmite powder possesses several important characteristics that make it valuable in various industries. It has a high surface area, good thermal stability, excellent chemical inertness, and specific particle size distribution. These properties make it suitable for applications such as catalyst supports, coatings, ceramics, and lithium-ion batteries.
