According to our (Global Info Research) latest study, the global High-purity Calcium Aluminate Cements market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Calcium aluminate cement is cement formed from the combination of limestone and Calcium aluminates, 'alumina cements' or 'high alumina cements' are obtained by the reaction at high temperature of lime (from limestone) and alumina (contained in natural minerals like Calcium Aluminate). The product obtained after cooling is a hard mineral: calcium aluminate clinker.

According to the Japan Cement Association, Japan's cement industry emitted about 40 million tons of carbon dioxide in 2020. And the cement industry became the fourth largest source of carbon dioxide emissions in the industrial sector after electricity, steel and chemicals. 60% of the cement industry's carbon emissions come from process emissions, 35% from combustion emissions and 5% from indirect emissions from electricity. According to our "Building Materials Research Institute", the global clinker capacity in 2022 was about 3.55 billion tons, and the global cement production was about 4.0 billion tons. According to the National Bureau of Statistics, China's cumulative cement output reached 2.118 billion tons in 2022.
