The global High Purity Calcium Hydroxide market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The high purity calcium hydroxide market refers to the market for calcium hydroxide that is produced using high purity raw materials and processes. Calcium hydroxide, also known as slaked lime, is a white powder used in a variety of applications, including in the production of cement, as a flocculant in water treatment, and as a pH regulator in various industries.

High purity calcium hydroxide is produced using high-quality limestone or calcium carbonate as raw materials and processed using specialized methods to ensure a high level of purity. The resulting product is a fine, white powder with a high degree of chemical purity, which makes it ideal for use in applications where purity is a critical factor, such as in the food and pharmaceutical industries.

The high purity calcium hydroxide market is driven by the growing demand for calcium hydroxide in various industries, particularly in the water treatment, construction, and food industries. The increasing awareness of the benefits of using high purity calcium hydroxide in these applications, such as its superior chemical purity and low impurity levels, is also driving market growth.
