According to our (Global Info Research) latest study, the global High-Purity Carbonyl Cobalt Powder market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

High-purity carbonyl cobalt powder is an important inorganic metal complex, also commonly known as octacarbonyl dicobalt ($\text{Co}_2(\text{CO})_8$), a metal organic chemical reagent and catalyst with high purity. It exists in the form of orange-red crystalline powder and has specific chemical and physical properties. $\text{Co}_2(\text{CO})_8$ means that each molecule consists of two cobalt atoms and eight carbon monoxide molecules. It is insoluble in water but soluble in most organic solvents. This property makes it widely used in organic synthesis and metal organic chemistry. Under specific conditions, such as strong alkaline solution or inert solvent, $\text{Co}_2(\text{CO})_8$ can undergo reduction reaction to generate other cobalt carbonyls. At the same time, it can also be used as a metal surface covering and a catalyst for chemical synthesis. Pure carbonyl cobalt powder is an orange-red crystal with a unique color and high purity. Its melting point is about 51~52°, and its relative density (water=1) is 1.87. These physical parameters are instructive for its storage, transportation and use.

The development status and dynamics of the high-purity carbonyl cobalt powder market can be analyzed in detail from the following aspects:
