Chromium carbide is a ceramic compound that exists in several chemical compositions: Cr_3C_2 , Cr_7C_3 , and Cr_{23}C_6 . At standard conditions it exists as a gray solid. It is extremely hard and corrosion resistant. It is also a refractory compound, which means that it retains its strength at high temperatures as well. These properties make it useful as an additive to metal alloys. When chromium carbide crystals are integrated into the surface of a metal it improves the wear resistance and corrosion resistance of the metal, and maintains these properties at elevated temperatures.
