High Purity Cycloolefin Monomer is a refined cyclic olefin raw material used to produce cycloolefin polymers and copolymers for optical, medical, electronic and high-performance packaging applications. It requires high chemical purity, low color, controlled moisture, low metal content and stable polymerization performance. The product is used in optical lenses, diagnostic consumables, medical containers, semiconductor packaging, high-frequency materials and precision films through downstream polymerization. The market includes high-purity norbornene-type and related cycloolefin monomers, but excludes finished cycloolefin polymers, ordinary olefins and general petrochemical monomers.

The industry chain includes petrochemical feedstocks, dicyclopentadiene derivatives, cyclic olefin intermediates, catalysts, solvents, purification systems, distillation equipment, high-purity containers and analytical testing instruments. Midstream
