High Purity Densified Yttrium Oxide (Y<sub>2</sub>O<sub>3</sub>) is a specialized ceramic material used primarily for its exceptional thermal, mechanical, and chemical properties. It is particularly valued in industries like semiconductors, aerospace, and optics, where high purity and performance are critical. Yttrium oxide is produced in high purity forms to ensure optimal performance in sensitive applications, especially where contamination must be minimized.

Powder coatings lack solvents, giving way to negligible volatile organic compound (VOC) emission into the atmosphere and reducing the risk of combustion during their usage and storage process. In addition, the powder can be easily washed when exposed to human skin, which reduces the risk of health problems for operators. ETFE is excellent in processability and able to form a thick and non-stick film layer with electrical, mechanical and chemical strength. FEP and PFA Coating Powder are low in melt viscosity and excellent in melt fluidity which can give a coating free of pinholes.
