Abstracts

The global High-purity Electrolytic Nickel Plate market size is expected to reach \$ 4507 million by 2032, rising at a market growth of 1.0% CAGR during the forecast period (2026-2032).

In 2025, global production of high-purity electrolytic nickel plate reached 240,000 tons, with an average selling price of US\$16,840 per ton. High-purity electrolytic nickel plate refers to metallic nickel plate with a purity of not less than 99.8% produced through an electrolytic process. It is formed by immersing nickel anodes and cathodes in an electrolyte solution and then applying electricity, causing pure nickel to be deposited in a controlled manner on the cathode surface. It possesses excellent corrosion resistance, ductility, and conductivity, and its applications cover stainless steel/special steel, alloys, electroplating, and new energy batteries. Upstream mainly consists of nickel matte, MS/MHP, and other nickel intermediates; midstream is electrolytic refining; downstream includes stainless steel and special steel plants, alloy plants, electroplating companies, and superalloy users. Gross profit margin ranges from approximately 10% to 25%.
