According to our (Global Info Research) latest study, the global High Purity Ion Membrane Caustic Soda market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

High-purity ion-exchange membrane caustic soda is produced by electrolyzing salt water using an ion exchange membrane method. The main principle is to pass an electric current through a sodium chloride solution, and under the action of an electric field, cations in the anode chamber pass through the membrane to the cathode chamber to produce caustic soda. The cation membrane is a film made of a selectively permeable polymer material that only allows cations of a certain size to pass through.
