Abstracts

The global High Purity Manganese Sulphate (HPMSM) market size is expected to reach \$ 1112 million by 2032, rising at a market growth of 16.9% CAGR during the forecast period (2026-2032).

High Purity Manganese Sulphate (HPMSM), also known as Battery-grade manganese sulfate (chemical formula: $MnSO_4 \cdot H_2O$), is a critical cathode precursor material used in the production of lithium-ion batteries, particularly in lithium manganese oxide (LMO), nickel-cobalt-manganese (NCM), and lithium iron phosphate-manganese (LMFP) chemistries. To qualify as "battery-grade," manganese sulfate must meet stringent purity requirements—typically 99.9% purity with extremely low heavy metal and water-soluble impurities. Product types include electrolytic manganese-based and chemical precipitation-based HPMSM. Manganese sulfate is favored for its relatively low cost, stability, and ability to enhance thermal stability and specific energy in battery systems. Its application is rapidly expanding across electric vehicles (EVs), energy storage systems (ESS), and portable electronics.

Currently the High Purity Manganese Sulphate (HPMSM) are mainly produced and consumed in China.

According to the International Energy Agency (IEA) Global EV Outlook 2024, global electric vehicle sales are projected to reach 17.1 million units in 2024, representing a 25% year-over-year growth, driven by policy support, improved battery economics, and consumer adoption. China leads the market with over 10 million units expected to be sold, accounting for nearly 60% of global sales. Europe follows with approximately 3.5 million units, and the United States with about 1.56 million units, respectively making up 20% and 9% of global sales. On the production side, China is the dominant hub due to

its vertically integrated battery and EV manufacturing ecosystem. Meanwhile, Europe and North America are accelerating domestic production to reduce reliance on Asian supply chains. Emerging markets such as India, Southeast Asia, and Latin America, while still nascent, are forecasted to grow at >40% CAGR over the next three years. Looking forward, EV growth will be catalyzed by declining battery costs (targeting
