According to our (Global Info Research) latest study, the global High Purity Medical Grade Isosorbide market size was valued at US\$ 65.7 million in 2024 and is forecast to a readjusted size of USD 80.9 million by 2031 with a CAGR of 2.8% during review period.

Pharmaceutical Grade Isosorbide is a high-purity chemical substance used in the pharmaceutical field. Isosorbide is a diol extracted from plant-derived materials (such as corn starch) and belongs to cyclic sugar alcohols. It has good biocompatibility and biodegradability. In the pharmaceutical field, isosorbide and its derivatives are used to produce drugs for the treatment of cardiovascular diseases, with good drug activity and safety. At the same time, isosorbide is also an effective osmotic oral dehydration diuretic.

The global pharmaceutical-grade isosorbide market is entering a period of steady growth, and the compound annual growth rate is expected to reach 2.88% in the next five years. This trend is mainly driven by two aspects: first, the rising incidence of chronic diseases such as cardiovascular diseases and neurological diseases has driven the growth of demand for core APIs such as isosorbide dinitrate; second, the research and development of innovative drugs is hot, and its technical value as a chiral intermediate in the development of controlled-release preparations and targeted drugs is highlighted. At the same time, the strict standards of the global pharmaceutical industry for the purity and stability of APIs have further strengthened the market barriers and premium space for high-purity pharmaceutical-grade products. From the perspective of regional distribution, Europe and China dominate the global supply of pharmaceutical-grade isosorbide. Europe occupies most of the market share with its

mature bio-based chemical industry chain. As an industry benchmark, Roquette, a French company, has long served the supply chain of multinational pharmaceutical companies by relying on continuous production processes and cGMP certification systems. China has risen rapidly through policy support and capacity upgrades. Local companies such as Yuteng Pharmaceuticals have broken through the bottleneck of high-purity purification technology and built a thousand-ton pharmaceutical-grade production line. Its cost advantage and localized service capabilities have gradually opened up the high-end market in Europe and the United States.

The main consumer market for pharmaceutical-grade products is relatively scattered, and there is demand in all countries around the world. Among them, the countries with greater demand include China, India, Japan, the United States, Europe and other developed pharmaceutical markets.
