According to our (Global Info Research) latest study, the global High Purity Medical Helium market size was valued at USD 235.6 million in 2022 and is forecast to a readjusted size of USD 343.9 million by 2029 with a CAGR of 5.6% during review period.

Helium is a second most abundant chemical element in the universe with symbol He and atomic number 2. It is a colorless, odorless, tasteless, non-toxic, inert, monatomic gas located at the top of the noble gases on the periodic table. Its boiling and melting points are the lowest among all the elements. Its clinical benefit in inhalation therapy arises from its advantageous physical properties than ambient air. Helium has lower density than air and generates less resistance than to provide improved lung ventilation. It is also used as an analytical reagent in diagnostic/imaging tests to detect respiratory function of the patient.
