According to our (Global Info Research) latest study, the global High Purity Metal Target market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

High Purity Metal Target is a material used in physical vapor deposition (PVD) processes, consisting of a high-purity metal in a specific shape, often a thin film or solid target. These targets are used to deposit thin films of the metal onto substrates in applications like semiconductor manufacturing and optical coatings, where purity is critical.

According to the SEMI report, the semiconductor materials market will grow by 8.6% in 2022, reaching a market size of 69.8 billion US dollars new highs. Since semiconductor materials belong to high-tech barrier industries, most of the high-end products of semiconductor materials are currently concentrated in the United States, Japan, Germany and other countries and regions. From the perspective of demand, China Taiwan, China mainland, South Korea, Japan, and the United States are the largest semiconductor material markets in the world, accounting for more than 80% of the global market.
