The global High Purity Potassium Permanganate market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

High purity potassium permanganate is a potassium salt of a tetrahedral transition metal oxide complex containing four O2-ligands and a manganese(VII) center. It is a strong oxidizing agent with purple-red crystals or powder.

The main raw materials of high-purity potassium permanganate are manganese ore, potassium oxide and sulfuric acid. Manganese ore is mainly distributed in countries such as South Africa, Australia, Brazil, Gabon, India and China. Potassium oxide and sulfuric acid can be obtained from various sources, such as natural gas, coal, pyrite, etc.

The main use of high-purity potassium permanganate is as an oxidant in industries such as pharmaceuticals, water treatment, metal surface treatment and disinfectants3. It can be used to synthesize antibiotics, hormones, vitamins and other drugs, and can also be used to remove organic matter, heavy metals and microorganisms in water, and can also be used to clean metal surfaces or disinfect wounds and utensils.

This report studies the global High Purity Potassium Permanganate production, demand, key manufacturers, and key regions.
