The global High-purity Solid Potassium Hydroxide market size is expected to reach \$ 6347.2 million by 2029, rising at a market growth of 7.0% CAGR during the forecast period (2023-2029).

Potassium hydroxide, chemical formula: KOH, commonly known as caustic potash, white solid, soluble in water and alcohol, but insoluble in ether, is a common inorganic base. It is easy to absorb moisture and deliquesce in the air, and can react with carbon dioxide to form potassium carbonate. So it will be used to absorb carbon dioxide. Potassium hydroxide is a typical strong base. The pH of 0.1mol/L solution is 13.5. There are many industrial applications, most of which are due to the reaction of potassium hydroxide with acid and the corrosiveness of potassium hydroxide itself. Potassium hydroxide is often used to make soft soap and liquid soap, and can also be used as a raw material for the production of potassium salt, and can also be used for electroplating, printing and dyeing, etc.
