The global High Purity Tungsten Target market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

High-purity tungsten target is a chemical product of typical transition metal tungsten. Because of its high purity (greater than 99.95%), high density (19.35g/cm³), low vapor pressure, low evaporation rate, and good high temperature resistance, it is commonly used To produce ultra-small tungsten oxide films. As far as the current hot semiconductor chip is concerned, the new tungsten oxide film can be used as a diffusion barrier layer, an adhesive layer and a large integrated circuit memory electrode, etc., which can significantly improve the overall quality of chip products.
