According to our (Global Info Research) latest study, the global High Purity Yttrium Oxide (Y₂O₃) Coating for Semiconductor Equipment market size was valued at USD 32 million in 2022 and is forecast to a readjusted size of USD 49 million by 2029 with a CAGR of 6.2% during review period.

Yttrium oxide thermal spray coat is used in semiconductor and liquid-crystal-display (LCD) fabricating equipment, and demanded high purity more than 99.99% to prevent from contaminations. By Y₂O₃ UD Coating, etching the surface of the part by the plasma gas and by-products of etching are minimized and so an interval between cleanings of the part is prolonged and efficiency of production process is improved remarkably. By Y₂O₃ UD Coating, the problem of Wafer contamination by particle deposition and flurrying particle is minimized and corrosion of the part by high temperature is blocked fundamentally.

Semiconductor manufacturing equipment is a medium tool for achieving semiconductor manufacturing processes, playing an important role in all aspects. According to SEMI, worldwide sales of semiconductor manufacturing equipment increased 5% from \$102.6 billion in 2021 to an all-time record of \$107.6 billion in 2022.

In recent years, the localization process of China's semiconductor industry has further accelerated, and the performance of semiconductor equipment is more flexible than the overall industry. The localization of semiconductor equipment is ushering in a golden wave, and domestic semiconductor equipment is facing more opportunities for verification and trial use, technical cooperation, and import substitution. For the third consecutive year, China remained the largest semiconductor equipment market in 2022

despite a 5% slowdown in the pace of investments in the region year over year, accounting for \$28.3 billion in billings.

The record high for semiconductor manufacturing equipment sales in 2022 stems from the industry's drive to add the fab capacity required to support long-term growth and innovations in key end markets including high-performance computing and automotive. Additionally, the results reflect investments and determination across regions to avoid future semiconductor supply chain constraints like those that surfaced during the pandemic.
