Abstracts

The global High Purity Yuanming Powder market size is expected to reach \$ 380 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

High Purity Yuanming Powder refers to high-purity sodium sulfate products produced through deep purification and refining processes. Its main component is high content anhydrous sodium sulfate with low impurity content, especially with strict control over chloride, heavy metals, and insoluble substances. It can meet the requirements of industries such as fine chemicals, electronic materials, pharmaceuticals, and high-end glass for raw material purity and stability. Compared with ordinary industrial grade Yuanming powder, high-purity Yuanming powder is superior in purity, particle size uniformity, and chemical stability. Therefore, it is commonly used in production processes that require high product quality and is one of the important product types for the high-end development of basic chemical raw materials. In 2025, global High Purity Yuanming Powder production reached approximately 1,425 K MT, with an average global market price of around US\$ 189 per MT.

With the rapid development of electronic chemicals, pharmaceutical intermediates, and high-end materials industries, the demand for high-purity chemical raw materials continues to increase, and the market for high-purity Yuanming powder is showing a gradual growth trend. At the same time, environmental policies and industrial upgrading promote enterprises to improve their purification technology and quality control level, leading to the development of products towards high purity, low impurities, and stable performance. In the future, the high-purity Yuanming powder market will benefit more from the development of fine chemicals and new materials industries, and gradually differentiate into segmented markets with higher added value from traditional bulk

chemical products.
