Abstracts

According to our (Global Info Research) latest study, the global High Rsolution Microfocus X-ray Tube market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Microfocus X-ray Tube is a monopolar X-ray tube made of all metal. Compared with conventional X-ray tubes, the sample can be placed very close to the focus, directly obtaining a high geometric magnification. The focus size of the microfocus ray source is smaller, reaching the micron level. At high geometric magnification, the image geometric unsharpness is reduced to a very low level to achieve a resolution up to the micron level.

High Rsolution Microfocus X-ray Tube equipment has a sub-micron resolution, less than 200 nanometers, and higher power, making it more widely used. It is made of high-quality materials, more durable, and more stable output.
