## Abstracts

The global High Sensitive Spark Detector market size is expected to reach \$ 233.9 million by 2029, rising at a market growth of 3.6% CAGR during the forecast period (2023-2029).

High Sensitive Spark Detector is a simple device which monitors the infrared light within the field of view of a special sensor which detects light in the infrared range. This light is emitted from all things which emanate heat, and sparks or burning embers emit a greater amount of infrared light in contrast to the surrounding area within a typical room, workshop or factory floor. Fire is also detectable by the spark detector, which means any deflagration event within the ductwork will be registered and abated by a properly designed fire extinguishment system.

This report studies the global High Sensitive Spark Detector production, demand, key manufacturers, and key regions.
