According to our (Global Info Research) latest study, the global High-Side FET Drivers market size was valued at US\$ 396 million in 2024 and is forecast to a readjusted size of USD 751 million by 2031 with a CAGR of 9.7% during review period.

High-side FET driver is an electronic component designed to control an N-channel MOSFET (or other types of FETs) in a high-side switching configuration. In such a configuration, the switch (typically a MOSFET) is placed between the load and the positive supply voltage. High-side FET drivers are essential because they enable the required voltage difference between the gate and source of the MOSFET to turn it on, especially when the source is tied to a higher voltage, such as the positive supply rail.

The global intelligent power switches market is expected to witness robust growth through 2023 due to rising demand of intelligent power switches in automotive and industrial application across globe.
