Abstracts

The global High Silica Cloth market size is expected to reach \$ 428 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

High Silica Cloth is a high-temperature industrial fabric made from high-silica fibers through weaving, acid treatment, heat treatment and other processing steps. It typically has a high silicon dioxide (SiO₂) content and offers excellent heat resistance, low thermal conductivity, ablation resistance, molten-metal splash resistance, flexibility and ease of cutting or fabrication. In 2025, Global High Silica Cloth sales are estimated at about 48,000 K Sqm, with an average ex-works price of 6.2 US/Sq m. The value chain covers sodium-silicate glass, glass yarn, acid-treatment chemicals and coating materials upstream; silica fiber processing, weaving, heat treatment and coating in the middle; and welding protection, metallurgy, shipbuilding, fire safety, aerospace, furnace insulation and industrial thermal-insulation users downstream.

The market growth of high silica cloth is mainly driven by rising demand for high-temperature protection, industrial safety and lightweight thermal insulation. Steelmaking, welding and cutting, foundry, shipbuilding, petrochemical, power generation and industrial furnace applications require reliable fire resistance, heat insulation and molten-metal splash protection, supporting stable demand for high silica cloth in fire blankets, fire curtains, insulation covers, pipe wrapping and equipment heat shields. At the same time, new energy batteries, energy storage systems, aerospace and rail transportation are creating additional demand for flexible, heat-resistant and low-thermal-conductivity materials, pushing silica cloth products toward coated, laminated and higher-performance grades. Compared with conventional fiberglass cloth, high silica cloth offers higher temperature resistance and better thermal stability, giving it upgrade potential in harsh high-temperature environments, although its higher cost and

competition from ceramic fiber cloth, basalt fiber fabric and aerogel blankets may limit adoption in price-sensitive applications.

This report studies the global High Silica Cloth production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for High Silica Cloth and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
