According to our (Global Info Research) latest study, the global High Softening Point Rosin Resin market size was valued at US\$ 1363 million in 2024 and is forecast to a readjusted size of USD 1787 million by 2031 with a CAGR of 4.2% during review period.

High softening point rosin resin is a natural resin with a high softening point, which is mainly processed from rosin extracted from pine plants. The resin has excellent insulation, heat resistance, weather resistance and chemical stability, so it is widely used in electronics, electrical appliances, coatings, inks, adhesives and other fields. The softening point of high softening point rosin resin is usually high, which means that it can still maintain good physical and chemical properties at high temperatures and is not easy to deform or melt. In addition, the resin also has good solubility and plasticity, which is easy to process and use.
