Abstracts

According to our (Global Info Research) latest study, the global High Specific Capacitance Chip Multilayer Ceramic Capacitors market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

High specific capacitance chip multilayer ceramic capacitors are laminated by ceramic dielectric diaphragms with printed electrodes (internal electrodes) in a dislocation manner, and are sintered at a high temperature to form a ceramic chip, and then sealed with a metal layer at both ends of the chip (outer electrode), thus forming a monolithic structure. High specific capacitance chip ceramic multilayer capacitors offer significant improvements over equivalent polymer capacitor performance and price comparisons demonstrate the potential of MLCCs to replace polymer capacitors in designs requiring high capacitance values and/or other system-level improvements.
