## Abstracts

The global High Specific Capacitance Chip Multilayer Ceramic Capacitors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

High specific capacitance chip multilayer ceramic capacitors are laminated by ceramic dielectric diaphragms with printed electrodes (internal electrodes) in a dislocation manner, and are sintered at a high temperature to form a ceramic chip, and then sealed with a metal layer at both ends of the chip (outer electrode), thus forming a monolithic structure. High specific capacitance chip ceramic multilayer capacitors offer significant improvements over equivalent polymer capacitor performance and price comparisons demonstrate the potential of MLCCs to replace polymer capacitors in designs requiring high capacitance values and/or other system-level improvements.
