## Abstracts

According to our (Global Info Research) latest study, the global High Speed CT Slip Ring market size was valued at US\$ 384 million in 2024 and is forecast to a readjusted size of USD 575 million by 2031 with a CAGR of 6.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

High-speed CT slip ring is a core component used in high-end medical imaging CT equipment, mainly responsible for transmitting energy and data between the rotating end and the fixed end of the CT. It consists of two main systems: a high-speed data non-contact transmission system (data ring) and a large-aperture disc-type conductive disc system (conductive ring). The data ring is responsible for achieving high-quality data transmission under high-speed rotation, and uses electro-optical and photoelectric conversion technology to ensure accurate signal transmission; the conductive ring solves the problem of power supply and control command transmission under high-speed rotation, and uses high-precision, large-aperture phantom integrated molding technology and low-wear, high-life conductive ring technology. High-speed CT slip rings are widely used in medical CT, security CT, industrial CT and other fields, and have undergone rigorous reliability design and verification to ensure stability and durability in high-demand environments.
