High speed low nitrogen burner refers to a burner with low NO_x emissions during fuel combustion. Choosing a low nitrogen burner can reduce the emission of nitrogen oxides during the combustion process. The nitrogen oxides generated during combustion are mainly NO and NO₂, which are generally referred to as nitrogen oxides NO_x. Multiple test results indicate that the nitrogen oxides emitted by the combustion device are mainly NO, accounting for about 95%, while NO₂ accounts for only about 5%. Low nitrogen burner is an environmentally friendly and energy-saving machine.
