The global High Speed Motor Stator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

High Speed Motor Stator is a fixed part of a high-speed motor, which is used to generate a constant magnetic field to make the rotor rotate inside it. This stator usually consists of a set of windings and magnetically conductive components such as iron cores or permanent magnets. The winding forms a current inside the stator to generate a rotating magnetic field, which interacts with the permanent magnet or current on the rotor to generate torque, thereby driving the rotor to rotate.
