Abstracts

According to our (Global Info Research) latest study, the global High Speed SerDes Devices market size was valued at US\$ 8211 million in 2025 and is forecast to a readjusted size of US\$ 19710 million by 2032 with a CAGR of 13.3% during review period.

In 2025, global High Speed Serdes Device output reached about 4 billion units and global capacity of around 5 billion units. The average price is about USD 2 per unit, with gross margins near 42%. High-Speed SerDes devices are integrated semiconductor components that convert parallel data into high-speed serial streams for transmission and then reconstruct the original parallel data at the receiver, enabling efficient, low-pin-count, high-bandwidth communication in systems such as data centers, networking equipment, automotive electronics, and high-performance computing. The supply chain begins upstream with semiconductor materials (silicon wafers, specialty substrates, EDA design tools, and IP cores for high-speed interfaces like PCIe, Ethernet, or SerDes PHYs), followed by midstream IC design companies (fabless firms and IDMs) that develop SerDes chips or integrate them into SoCs, and semiconductor foundries (e.g., advanced-node fabs) that manufacture the devices, along with OSAT providers for packaging and testing; downstream, these components are embedded into switches, routers, servers, storage systems, automotive ADAS/infotainment platforms, and industrial equipment, and are ultimately deployed by cloud service providers, telecom operators, automotive OEMs, and enterprise IT users requiring ultra-high data throughput and signal integrity.
