Abstracts

According to our (Global Info Research) latest study, the global High Speed Solventless Laminating Machine market size was valued at US\$ 498 million in 2025 and is forecast to a readjusted size of US\$ 792 million by 2032 with a CAGR of 6.7% during review period.

In 2025, global High Speed Solventless Laminating Machine production reached approximately 1,695 units, with an average global market price of around 285.6 K USD/unit.

High Speed Solventless Laminating Machine is a core equipment in the flexible packaging industry, designed to composite two or more substrates such as plastic films, aluminum foils and special papers using solvent-free reactive adhesives. It features high running speed (usually over 300 meters per minute), precise coating control and stable compounding performance, realizing zero VOCs emission during production by eliminating organic solvents. With compact structure and efficient operation, it adapts to diverse high-end packaging needs and harsh production requirements, ensuring composite materials have excellent properties like high barrier, puncture resistance and peel strength.

The demand for this machine is driven by strict environmental policies, the green transformation of the packaging industry and the expanding demand for high-end packaging in food, pharmaceutical and daily chemical sectors, with the upgrading of pre-made food and biopharmaceutical industries further boosting demand. Business opportunities lie in developing intelligent models integrated with remote monitoring and fault diagnosis functions, optimizing core technologies to improve adaptability to special

substrates, expanding applications in new fields such as new energy battery diaphragms, and strengthening the competitiveness of domestic equipment through independent R&D of core components to seize the market share of imported products.
