## Abstracts

The global High-Speed Steel Twist Drill for Electric Drill market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The upstream of the high-speed steel twist drill industry chain is mainly the manufacturer of high-speed steel, and the downstream is mainly the users of various machining, manufacturing, maintenance and other industries. The market prospect of high-speed steel twist drills is affected by many factors, such as domestic and foreign economic situation, industry demand, technological innovation, product quality, price competition, etc.

The high-speed steel twist drill is a tool that drills the round hole of the workpiece through its rotating cutting relative to the fixed axis. Spiral grooves have 2 grooves, 3 grooves or more grooves, but 2 grooves are the most common. High-speed steel twist drills are usually used in bench drills, electric hand drills, numerical control equipment, CNC machining center drills and other equipment fields. Compared with alloy twist drills, the cost of high-speed steel twist drills is lower. Low-end high-speed steel twist drills are used in processing copper, iron, aluminum, etc. When it is easy to cut metal materials, the effect is often satisfactory, because the cost is low, and when the processing efficiency does not need to be particularly high, high-speed steel twist drills are often more affordable than alloy twist drills, especially manual drills such as hand electric drill bench drills. For equipment such as high-speed steel twist drills, alloy twist drills are far less easy to use than high-speed steel twist drills because of the unbreakable characteristics of high-speed steel twist drills. . When the length-to-diameter ratio is about 4:1 or less, the chip flutes of most standard high-speed steel drill bits can discharge chips removed by the cutting edge of the drill bit more smoothly. When the

length-to-diameter ratio exceeds the above range, it is necessary to use a specially designed deep hole drill to achieve effective processing. In recent years, drill manufacturers have developed two new types of deep hole processing drills - ordinary parabolic drills and wide-edged parabolic drills. type drill.
