According to our (Global Info Research) latest study, the global High-speed Vertical Machining Center (Spindle Speed Above 18000rpm) market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

High-speed vertical machining center is a CNC machine tool with specific technical parameters, which is mainly used for complex parts processing in the field of mechanical engineering. One of the core features of high-speed vertical machining centers is its spindle speed. According to market classification, vertical machining centers with spindle speeds above 18,000 rpm are called high-speed. This high speed enables the machine tool to complete more cutting actions in a short time, significantly improving processing efficiency. High-speed vertical machining centers are widely used in high-end manufacturing industries such as aerospace, automobile manufacturing, mold manufacturing, etc. to meet the needs of high-precision and high-efficiency processing.

The high-speed vertical machining center industry has developed rapidly in recent years, especially in the field of high-speed five-axis vertical machining centers. Although its output and sales account for a small proportion of the total vertical machining centers, its proportion is expected to gradually increase with technological progress and industrial upgrading. High-speed vertical machining centers are characterized by high rigidity, high precision, high speed and high efficiency, and are suitable for the processing of complex parts. Equipped with an automatic tool change system, it can

realize the automatic replacement of multiple tools and improve processing efficiency. With the rapid development of the manufacturing industry, the market size of vertical machining centers continues to expand. It is expected that the market size will continue to grow rapidly in the next few years, with the high-end market growing faster. In summary, the high-speed vertical machining center market has broad development prospects and potential.
