Abstracts

The manufacturing process of high-strength enclosed bus duct is not limited by the plate. The shell is made of tile trench, which increases the mechanical strength of the bus. The horizontal section of the bus can be produced to 13m long. As the shell is made of tile trench, the position of the pit trench is intended to separate and fix the bus bars. There is a spacing of 18mm between the buses. The lines are well ventilated, so that the moisture-proof and heat dissipation functions of the bus duct are significantly improved, which is more suitable for the southern climate; As there is a certain gap between the lines, the temperature rise of the conductor will decrease, which improves the overload capacity and reduces the magnetic oscillation noise.
