In 2025, global High-strength Marine Anti-fouling Netting production reached approximately 138.71 k tons, with an average global market price of around USD 6,200 per ton.

The gross profit margin of major companies in the industry is between 16.48%?31.76%.

In 2025, the global production capacity of High-strength Marine Anti-fouling Netting was approximately 182.51 k tons.

High-strength Marine Anti-fouling Netting is a durable aquaculture or marine netting material designed to resist biofouling, mechanical abrasion, tearing and long-term seawater exposure. It may use high-tenacity polymer fibers, special coatings, copper-based or non-copper anti-fouling treatments and reinforced knitting or weaving structures. The product is used in offshore aquaculture cages, coastal fish farming, marine protection systems and net pen infrastructure. The market includes treated high-strength netting materials, but excludes ordinary fishing nets, complete aquaculture cages and chemical antifouling coatings sold separately.

The industry chain includes high-strength polymer fibers, nylon, polyethylene, polyester, anti-fouling additives, coating resins, copper-free or copper-based treatments, dyes,

knitting equipment and testing services. Midstream production covers fiber preparation, twisting, knitting or weaving, coating, curing, washing, strength testing, antifouling performance testing and packaging. Downstream demand comes from marine aquaculture, offshore fish farms, cage manufacturers, net maintenance services and coastal farming operators. Growth is driven by offshore aquaculture, longer service life requirements, labor-saving maintenance, fish health and marine biofouling control.
