Abstracts

According to our (Global Info Research) latest study, the global High Strength Monolithic Cesium Potassium Fireproof Glass market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

High-strength monolithic cesium potassium fire-resistant glass (chemical fire-resistant glass) is a new type of building functional material with good light transmission and fire-retardant properties. Usually it is transparent like ordinary glass. After a few minutes of fire, the chemically toughened layer can prevent the spread of flame and heat transfer, confine the fire to a small area near the ignition point, and play a role in fire protection. It still has good fire and flame retardancy at high temperatures above 1200 °C. This kind of transparent fireproof safety glass can be used as fireproof doors, fireproof windows and fireproof partitions of public buildings such as high-end hotels, theaters, exhibition halls, airports, gymnasiums, hospitals, libraries, commercial buildings, and other civil and public buildings without fire compartment requirements. Ideal fire protection material for range.
