Abstracts

The global High Strength Monolithic Cesium Potassium Fireproof Glass market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

High-strength monolithic cesium potassium fire-resistant glass (chemical fire-resistant glass) is a new type of building functional material with good light transmission and fire-retardant properties. Usually it is transparent like ordinary glass. After a few minutes of fire, the chemically toughened layer can prevent the spread of flame and heat transfer, confine the fire to a small area near the ignition point, and play a role in fire protection. It still has good fire and flame retardancy at high temperatures above 1200 °C. This kind of transparent fireproof safety glass can be used as fireproof doors, fireproof windows and fireproof partitions of public buildings such as high-end hotels, theaters, exhibition halls, airports, gymnasiums, hospitals, libraries, commercial buildings, and other civil and public buildings without fire compartment requirements. Ideal fire protection material for range.
