## Abstracts

The global High-strength PBAT market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Polybutylene adipate terephthalate (PBAT) is a biodegradable and compostable polymer that is known for its flexibility, toughness, and good processability. High-strength PBAT is an enhanced version of standard PBAT, designed to offer improved mechanical properties such as tensile strength, elongation at break, and impact resistance. This makes it suitable for applications that require both biodegradability and higher performance. By improving the polymer's strength, it becomes more versatile for a wider range of applications, including those that traditionally rely on conventional, non-biodegradable plastics.

This report studies the global High-strength PBAT production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for High-strength PBAT, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2023 as the base year. This report explores demand trends and competition, as well as details the characteristics of High-strength PBAT that contribute to its increasing demand across many markets.
