Abstracts

According to our (Global Info Research) latest study, the global High Temp Single Phase Ferrous Magnets market size was valued at USD 860.2 million in 2022 and is forecast to a readjusted size of USD 1282.1 million by 2029 with a CAGR of 5.9% during review period.

The High Temp Single Phase Ferrous Magnet is a NiCuZn series ferrite material containing specified amounts of iron oxide, copper oxide, zinc oxide, and nickel oxide as the main components and specified amounts of bismuth oxide, silicon oxide, magnesium oxide, and cobalt oxide as the auxiliary components, thus constituting a ferrite material that provides extremely good temperature characteristics (small change in permeability with respect to temperature change), high quality factor Q, and high strength, NiCuZn series ferrite materials with high strength.

Researchers have been searching for new materials that can maintain subferromagnetism at high temperatures. This may involve synthesising new compounds, changing crystal structures or exploring combinations of different elements. For high-temperature single-phase ferrimagnetism, researchers have endeavoured to optimise its magnetic properties, including improving magnetisation strength, permeability and resistance to high-temperature demagnetisation. Theoretical studies play an important role in revealing the fundamental properties of high-temperature single-phase ferrimagnetism. Through calculations and simulations, scientists can better understand the electronic structure and magnetic properties of these materials. Some teams may conduct research in exploring practical applications of high-temperature single-phase subferromagnetism. This may include areas such as magnetic storage, sensor technology, and spintronics. The development of experimental techniques is

crucial for studying the properties of high-temperature single-phase ferrimagnetism. For example, high-resolution experimental techniques can help scientists observe and measure the microstructure and magnetic properties of these materials.
