According to our (Global Info Research) latest study, the global High Temperature Adhesives market size was valued at US\$ 4541 million in 2024 and is forecast to a readjusted size of USD 5824 million by 2031 with a CAGR of 3.7% during review period.

Adhesive refers to a chemical substance that can firmly connect two or more surface-treated materials and has a certain mechanical strength. High-temperature adhesives can work at high temperatures and must meet one of the following conditions: (1) long-term use at 121-175°C (1-5 years cumulatively), or cumulative use at 204-232°C for 20,000-40,000 hours; (2) cumulative use at 260-371°C for 200-1,000 hours; (3) cumulative use at 371-427°C for 24-200 hours; (4) use at 538-816°C for 2-10 minutes. High temperature adhesives also have the following characteristics: (1) Good thermal physical and chemical properties, high thermal deformation, thermal decomposition and thermal weight loss temperatures; (2) Good processing performance; (3) Under working conditions, they still have the original performance after long-term exposure to high temperatures; (4) Under periodic temperature changes, they have good heat resistance and can withstand the test of high temperatures in a short period of time.

Global core high temperature adhesive manufacturers include 3M, Dow and Henkel etc. The Top 3 companies hold a share about 30%. North America is the largest market, with a share about 29%, followed by Europe and Asia Pacific with the share about 28% and 27%.
