Abstracts

In the general industrial gas field, the compressed air comes out from the rear end of the air compressor, and the temperature is below 50°C. Current normal temperature refrigerated dryers can achieve effective drying within this temperature range; if the air is discharged if the temperature is higher than 50°C, a high-temperature refrigerated dryer must be configured. Compared with normal temperature refrigerated dryers, it has a built-in cooler. This report studies high temperature air-cooled refrigeration dryer.
