High Temperature Baghouse Dust Collector is a device used to separate and collect solid particles from industrial waste gas, and can operate effectively in high temperature environments. The dust collector uses high temperature filter bags (usually made of special heat-resistant materials) to filter dust and particles from the waste gas. High temperature baghouse dust collectors are usually used to treat industrial waste gas with a temperature of up to 200°C or higher, and are widely used in industries such as steel, cement, electricity, and chemicals where high temperature dust-laden gas needs to be treated.
